DETAILED ACTION

Allowable Subject Matter

Claims 21, 24-34 and 37-42 are allowed.

The following is an examiner's statement of reasons for allowance: the closest prior art applied, Dupray et al in view of Snyder et al and further in view of Vazvan et al discloses calculating the distance with the equation $D=c*(t_a-t_2)-e$, however, e does not depend on a maximum distance by which the at least one relay station can move during Δt as claimed. Therefore, the prior art applied fails to teach, suggest or render obvious a method for locating a mobile station using fixed transmitting stations transmitting a location signal from each station to the mobile station and receiving a response to the location signal from the mobile station at the fixed transmitting station with a relay station retransmitting the location signal from the fixed transmitting station to the mobile station and retransmitting the response from the mobile station to the fixed transmitting station when direct signals are not available from the fixed transmitting station, determining the position of the relay station, determining the distance between the mobile station and the fixed transmitting station and/or relay station and locating the mobile station on the basis of the distances; *where the relay station is movable and the distance between the relay station and the mobile station is calculated by $D=c(\Delta t) + \beta * d_{max}$.*

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
